NOXAOS

THE SIMPLE SECURITY SYSTEM

BECOMES LOUD UPON THE SLIGHTEST MOVEMENT

Simply and effortlessly, the NOX AOS detector consistently monitors paintings, sculptures and smaller exhibits while remaining undetected. The high-precision sensor technology and sophisticated electronics ensure interference-free and continuous security.

Do you want to monitor your exhibits easily and with little effort? If supervisory personnel are present and a local alarm is sufficient, the NOX AOS is the right choice. You don't need an alarm system or any other components, and there's no need for costly installation. The NOX AOS simply reacts to the smallest changes. If the position of the exhibit changes, the NOX AOS alerts acoustically with the integrated high-performance buzzer and visually with two flash LEDs. The sensor can be placed on the wall or directly onto the exhibit, as it operates without contacts or wiring. The sensor is ideal for use at changing exhibitions, and the energy-saving functions of

both the soft- and hardware, as well as the power supply via a standard battery, allow several months of maintenance-free operation. Lengthy calibration and alarm resetting of the sensor is no longer necessary, as the sensor automatically confirms and recalibrates itself during commissioning and after being triggered. The NOX AOS consistently monitors, supports and relieves the local supervisory staff.

SECURITY MADE SIMPLE

NON-CONTACT MONITORING

No longer necessary to attach the sensor to the protected object. Up-to-the-minute and uncomplicated, the system operates efficiently without contacts or wires.

FLASH-LED-TECHNOLOGY

The ultra-white and very bright LEDs enable orientation and location of the activated detector.

REAL-TIME ALERTS

The newly-developed sensor can detect the smallest movement or touch and trigger an immediate alarm signal.

HIGH PERFORMANCE BUZZER

The high-frequency alarm signal is unmistakable; even in well-attended museums, galleries and exhibitions, no alarm is missed.

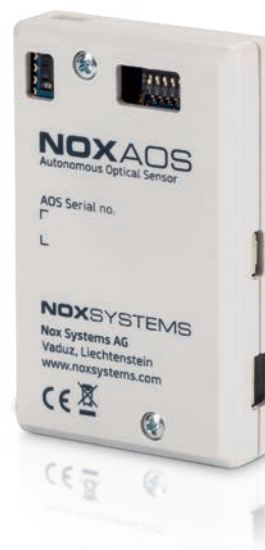

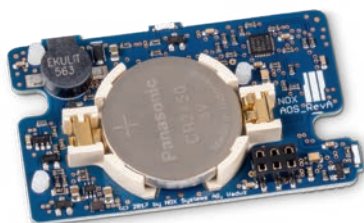

OUTSTANDING BATTERY LIFE

The new batteries last up to 5 months, reducing the handling of the protected object.

SMALL, COMPACT, SIMPLE

- Dimensions (L×B×H): 61×38×14 mm
- Weight incl. batteries: 35 g
- Optical distance sensor
- High performance buzzer max. 94 dB
- Flash LED technology
- Stand-alone solution
- Different operating modes available
- Battery life: 3–5 months
- Commercially available batteries
